## Problem

$$\Lambda = \{\lambda_n\}_n \subset \mathbb{R}. \text{ Is } \{e^{i\lambda_n x}\}_{\lambda_n \in \Lambda} \text{ complete in } L^2(0,a)?$$

990

2 / 12

## Problem

$$\Lambda = \{\lambda_n\}_n \subset \mathbb{R}. \text{ Is } \{e^{i\lambda_n x}\}_{\lambda_n \in \Lambda} \text{ complete in } L^2(0,a)?$$

## Restatement

If not, then 
$$\int_{-a}^{a} f(t)e^{-i\lambda_n t}dt = 0$$

## Problem

$$\Lambda = \{\lambda_n\}_n \subset \mathbb{R}. \text{ Is } \{e^{i\lambda_n x}\}_{\lambda_n \in \Lambda} \text{ complete in } L^2(0,a)?$$

## Restatement

If not, then 
$$\int_{-a}^{a} f(t)e^{-i\lambda_n t}dt = 0 = \hat{f}(\lambda_n)$$
.

## Problem

$$\Lambda = \{\lambda_n\}_n \subset \mathbb{R}. \text{ Is } \{e^{i\lambda_n x}\}_{\lambda_n \in \Lambda} \text{ complete in } L^2(0,a)?$$

## Restatement

If not, then 
$$\int_{-a}^{a} f(t)e^{-i\lambda_{n}t}dt = 0 = \hat{f}(\lambda_{n}).$$
  
 $\hat{f}|_{\Lambda} = 0$ 

## Problem

$$\Lambda = \{\lambda_n\}_n \subset \mathbb{R}. \text{ Is } \{e^{i\lambda_n x}\}_{\lambda_n \in \Lambda} \text{ complete in } L^2(0,a)?$$

## Restatement

If not, then 
$$\int_{-a}^{a} f(t)e^{-i\lambda_{n}t}dt = 0 = \hat{f}(\lambda_{n})$$
.  
 $\hat{f}|_{\Lambda} = 0$ . Is  $\Lambda$  a uniqueness set in  $PW_{a}$ ?  
(Uniqueness set:  $F, G \in PW_{a}$  and  $F = G$  on  $\Lambda \Rightarrow F \equiv G$ .)

## Problem

$$\Lambda = \{\lambda_n\}_n \subset \mathbb{R}. \text{ Is } \{e^{i\lambda_n x}\}_{\lambda_n \in \Lambda} \text{ complete in } L^2(0,a)?$$

### Restatement

If not, then 
$$\int_{-a}^{a} f(t)e^{-i\lambda_{n}t}dt = 0 = \hat{f}(\lambda_{n})$$
.  
 $\hat{f}|_{\Lambda} = 0$ . Is  $\Lambda$  a uniqueness set in  $PW_{a}$ ?  
(Uniqueness set:  $F, G \in PW_{a}$  and  $F = G$  on  $\Lambda \Rightarrow F \equiv G$ .)

Solved by Beurling & Malliavin in 1967.

3

2 / 12

## Problem

### Restatement

If not, then 
$$\int_{-a}^{a} f(t)e^{-i\lambda_{n}t}dt = 0 = \hat{f}(\lambda_{n})$$
.  
 $\hat{f}|_{\Lambda} = 0$ . Is  $\Lambda$  a uniqueness set in  $PW_{a}$ ?  
(Uniqueness set:  $F, G \in PW_{a}$  and  $F = G$  on  $\Lambda \Rightarrow F \equiv G$ .)

Solved by Beurling & Malliavin in 1967.

 $R(\Lambda) = d^*_{BM}(\Lambda)$ 

### Problem

$$\Lambda = \{\lambda_n\}_n \subset \mathbb{R}. \text{ Is } \{e^{i\lambda_n x}\}_{\lambda_n \in \Lambda} \text{ complete in } L^2(0,a)?$$

### Restatement

If not, then 
$$\int_{-a}^{a} f(t)e^{-i\lambda_{n}t}dt = 0 = \hat{f}(\lambda_{n})$$
.  
 $\hat{f}|_{\Lambda} = 0$ . Is  $\Lambda$  a uniqueness set in  $PW_{a}$ ?  
(Uniqueness set:  $F, G \in PW_{a}$  and  $F = G$  on  $\Lambda \Rightarrow F \equiv G$ .)

Solved by Beurling & Malliavin in 1967.

$$R(\Lambda) = d^*_{BM}(\Lambda)$$

In 2010, Makarov and Poltoratski reformulated their results, using Model Spaces and Toeplitz kernels.

### Problem

$$\Lambda = \{\lambda_n\}_n \subset \mathbb{R}. \text{ Is } \{e^{i\lambda_n x}\}_{\lambda_n \in \Lambda} \text{ complete in } L^2(0,a)?$$

#### Restatement

If not, then 
$$\int_{-a}^{a} f(t)e^{-i\lambda_{n}t}dt = 0 = \hat{f}(\lambda_{n})$$
.  
 $\hat{f}|_{\Lambda} = 0$ . Is  $\Lambda$  a uniqueness set in  $PW_{a}$ ?  
(Uniqueness set:  $F, G \in PW_{a}$  and  $F = G$  on  $\Lambda \Rightarrow F \equiv G$ .)

Solved by Beurling & Malliavin in 1967.

$$R(\Lambda) = d^*_{BM}(\Lambda)$$

In 2010, Makarov and Poltoratski reformulated their results, using Model Spaces and Toeplitz kernels.

$$R(\Lambda) = \sup\{a : KerT_{\bar{S}^a J_{\Lambda}} = 0\},\$$

 $S(z) = e^{iz}$  and  $J_{\Lambda}$  is an MIF with  $\sigma(J) = \Lambda$ .

## Model Spaces

## Paley Wiener Space

$$\mathcal{PW}_{a}=S^{-a}[\mathcal{H}^{2}\ominus S^{2a}\mathcal{H}^{2}],$$
 where  $S(z)=e^{iz}$ 

## Model Spaces

## Paley Wiener Space

$$\mathcal{PW}_{a}=S^{-a}[\mathcal{H}^{2}\ominus S^{2a}\mathcal{H}^{2}],$$
 where  $S(z)=e^{iz}$ 

Model Spaces

$$K_{S^{2a}} = \mathcal{H}^2 \ominus S^{2a} \mathcal{H}^2$$

Rishika Rupam (joint work with Mishko Mitk( Inner Functions and Inverse Spectral theory Decem

F

## Paley Wiener Space

$$\mathcal{PW}_{a}=S^{-a}[\mathcal{H}^{2}\ominus S^{2a}\mathcal{H}^{2}],$$
 where  $S(z)=e^{iz}$ 

## Model Spaces

$$\begin{array}{rcl} \mathcal{K}_{S^{2a}} & = & \mathcal{H}^2 \ominus S^{2a} \mathcal{H}^2 \\ \mathcal{K}_{\Theta} & = & \mathcal{H}^2 \ominus \Theta \mathcal{H}^2. \end{array}$$

Rishika Rupam (joint work with Mishko Mitk Inner Functions and Inverse Spectral theory

## Paley Wiener Space

$$\mathcal{PW}_{a}=S^{-a}[\mathcal{H}^{2}\ominus S^{2a}\mathcal{H}^{2}],$$
 where  $S(z)=e^{iz}$ 

Model Spaces

$$\begin{array}{rcl} \mathcal{K}_{S^{2a}} & = & \mathcal{H}^2 \ominus S^{2a} \mathcal{H}^2 \\ \mathcal{K}_{\Theta} & = & \mathcal{H}^2 \ominus \Theta \mathcal{H}^2. \end{array}$$

What about uniqueness sets of  $K_{\Theta}$ ?

э

## **Problem Statement**

Consider the Schrödinger operator

$$u \rightarrow -u'' + qu$$

on some  $L^2(a, b)$ .

$$u \rightarrow -u'' + qu$$

on some  $L^2(a, b)$ .

$$cos(\alpha)u(a) + sin(\alpha)u'(a) = 0$$
  

$$cos(\beta)u(b) + sin(\beta)u'(b) = 0.$$

$$u \rightarrow -u'' + qu$$

on some  $L^2(a, b)$ .

$$\cos(\alpha)u(a) + \sin(\alpha)u'(a) = 0$$
  
$$\cos(\beta)u(b) + \sin(\beta)u'(b) = 0.$$

### Question

Can we reconstruct potential **uniquely** from spectral data?

$$u \rightarrow -u'' + qu$$

on some  $L^2(a, b)$ .

DQC

$$u \rightarrow -u'' + qu$$

on some  $L^2(a, b)$ .

u(a) = 0 (i.e.  $\alpha = 0$ , Dirichlet condition)  $\cos(\beta)u(b) + \sin(\beta)u'(b) = 0.$ 

nac

$$u \rightarrow -u'' + qu$$

on some  $L^2(a, b)$ .

u(a) = 0 (i.e.  $\alpha = 0$ , Dirichlet condition)  $\cos(\beta)u(b) + \sin(\beta)u'(b) = 0.$ 

Weyl-Titchmarsh described the Weyl-m function in 1920s. Makarov and Poltoratski introduced the natural notion of a Weyl inner function in 2010.

$$u \rightarrow -u'' + qu$$

on some  $L^2(a, b)$ .

$$u(a) = 0$$
 (i.e.  $\alpha = 0$ , Dirichlet condition)  
 $\cos(\beta)u(b) + \sin(\beta)u'(b) = 0.$ 

Weyl-Titchmarsh described the Weyl-m function in 1920s. Makarov and Poltoratski introduced the natural notion of a Weyl inner function in 2010. **Spectral Relation** 

 $\sigma(L,D,\beta) = \sigma(\Theta),$ 

$$u \rightarrow -u'' + qu$$

on some  $L^2(a, b)$ .

$$u(a) = 0$$
 (i.e.  $\alpha = 0$ , Dirichlet condition)  
 $\cos(\beta)u(b) + \sin(\beta)u'(b) = 0.$ 

Weyl-Titchmarsh described the Weyl-m function in 1920s. Makarov and Poltoratski introduced the natural notion of a Weyl inner function in 2010. **Spectral Relation** 

$$\sigma(L, D, \beta) = \sigma(\Theta),$$
  
 $\sigma(L, e^{i\alpha}D, \beta) = \sigma(e^{-i\alpha}\Theta)$ 

where  $\Theta$  is the Weyl inner function.

$$u \rightarrow -u'' + qu$$

on some  $L^2(a, b)$ .

$$u(a) = 0$$
 (i.e.  $\alpha = 0$ , Dirichlet condition)  
 $\cos(\beta)u(b) + \sin(\beta)u'(b) = 0.$ 

Weyl-Titchmarsh described the Weyl-m function in 1920s. Makarov and Poltoratski introduced the natural notion of a Weyl inner function in 2010. **Spectral Relation** 

$$\begin{aligned} \sigma(L,D,\beta) &= \sigma(\Theta), \\ \sigma(L,e^{i\alpha}D,\beta) &= \sigma(e^{-i\alpha}\Theta) \end{aligned}$$

where  $\Theta$  is the Weyl inner function.

### Marchenko

The Weyl -m function (and hence the Weyl-inner function) determines the potential uniquely.

Rishika Rupam (joint work with Mishko Mitki Inner Functions and Inverse Spectral theory December 1st, 2015 8 / 12

 $\Phi$  is a Weyl inner function of a Schrödinger operator with potential in  $L^2(0, b)$ . A is a separated sequence on  $\mathbb{R}$ .

 $\Phi$  is a Weyl inner function of a Schrödinger operator with potential in  $L^2(0, b)$ .  $\Lambda$  is a separated sequence on  $\mathbb{R}$ .

## Lemma (Mitkovski, R.)

The sequence  $\Lambda$  uniquely defines  $\Phi$  if and only if the set  $\Lambda \cup \{a\}$  is a uniqueness set for  $K^2_{\Phi^2}$ , for all  $a \in \mathbb{R} \setminus \Lambda$ .

 $\Phi$  is a Weyl inner function of a Schrödinger operator with potential in  $L^2(0, b)$ .  $\Lambda$  is a separated sequence on  $\mathbb{R}$ .

## Lemma (Mitkovski, R.)

The sequence  $\Lambda$  uniquely defines  $\Phi$  if and only if the set  $\Lambda \cup \{a\}$  is a uniqueness set for  $K^2_{\Phi^2}$ , for all  $a \in \mathbb{R} \setminus \Lambda$ .

## Lemma (Mitkovski, R.)

If  $\Phi$  is a Weyl inner function, then  $\Lambda$  does not uniquely defines  $\Phi$  iff for some MIF  $\Theta$  with  $\sigma(\Theta) = \Lambda$ , there is an non-zero  $f \in \ker^2_{\Phi^2\Theta}$  and f(a) = 0 for some  $a \in \mathbb{R} \setminus \Lambda$ .

### What it means: Schrödinger case

Let *L* be a Schrödinger operator, with potential *q*. Let  $\Lambda = {\lambda_n}_n$  be a sequence such that  $\lambda_n \in \sigma(L, \alpha_n, D)$ . Then, this data uniquely identifies *q* iff  $\Lambda \cup {a}$  is a uniqueness set for  $K^2_{\Phi^2}$ , for any point  $a \in \mathbb{R} \setminus \Lambda$ . (Here,  $\Phi$  is the related Weyl inner function.)

## What it means: Schrödinger case

Let *L* be a Schrödinger operator, with potential *q*. Let  $\Lambda = \{\lambda_n\}_n$  be a sequence such that  $\lambda_n \in \sigma(L, \alpha_n, D)$ . Then, this data uniquely identifies *q* iff  $\Lambda \cup \{a\}$  is a uniqueness set for  $K^2_{\Phi^2}$ , for any point  $a \in \mathbb{R} \setminus \Lambda$ . (Here,  $\Phi$  is the related Weyl inner function.) Question: What can we say in the case of MIFs corresponding to a different class of operators?

## Some more questions

### Makarov and Poltoratski

If there is a non-constant  $G \in K_{\Phi}^{\infty}$  such that  $G = \overline{G}$ , then  $\Lambda$  is not defining for  $\Phi$ .

## Some more questions

## Makarov and Poltoratski

If there is a non-constant  $G \in K_{\Phi}^{\infty}$  such that  $G = \overline{G}$ , then  $\Lambda$  is not defining for  $\Phi$ .

### Mitkovski, R.

Suppose  $\Lambda$  is not defining for an MIF  $\Phi$ , then there is a non-constant  $G \in K_{\Phi}^+$  such that  $G = \overline{G}$  on  $\Lambda$ .

## Some more questions

## Makarov and Poltoratski

If there is a non-constant  $G \in K_{\Phi}^{\infty}$  such that  $G = \overline{G}$ , then  $\Lambda$  is not defining for  $\Phi$ .

### Mitkovski, R.

Suppose  $\Lambda$  is not defining for an MIF  $\Phi$ , then there is a non-constant  $G \in K_{\Phi}^+$  such that  $G = \overline{G}$  on  $\Lambda$ . In fact the other MIF  $\Phi_2$  can be written as

$$\Phi_2 = e^{ic} \Phi rac{ar{G}}{G}$$

where c is some real constant.

Question: In which cases can we 'close the gap'?

Thank you!
