Jarkko Peltomäki and Markus Whiteland

- Background on the square root map
- Open problems

(4) E > (4) E >

## Minimal squares

- Let s be a Sturmian word of slope [0; a + 1, b + 1, ...].
  - Between two blocks 1, there is  $0^a$  or  $0^{a+1}$ .
  - Between two blocks  $10^{a+1}$ , there is  $(10^a)^b$  or  $(10^a)^{b+1}$ .
- Any position in *s* begins with one of the six squares:

$$\begin{split} S_1^2 &= 0^2, \qquad S_4^2 &= (10^a)^2, \\ S_2^2 &= (010^{a-1})^2, \quad S_5^2 &= (10^{a+1}(10^a)^b)^2, \\ S_3^2 &= (010^a)^2, \qquad S_6^2 &= (10^{a+1}(10^a)^{b+1})^2, \end{split}$$

- The squares are *minimal*: they do not have proper square prefixes.
- The *square roots* in the case *a* = 1, *b* = 0 appear in the footer of every slide.

< 同 > < 回 > < 回 >

• Every Sturmian word *s* is a product of these six minimal squares.

• 
$$s = X_1^2 X_2^2 X_3^2 \cdots$$
  
•  $\sqrt{s} = X_1 X_2 X_3 \cdots$ 

• The square root map deletes half of each square.

#### Example: Fibonacci

$$f = (010)^2 \cdot (100)^2 \cdot (10)^2 \cdot (01)^2 \cdot 0^2 \cdot (10010)^2 \cdots ,$$
  
$$\sqrt{f} = 010 \cdot 100 \cdot 10 \cdot 01 \cdot 0 \cdot 10010 \cdots$$

#### Theorem (P.-W.)

If s is a Sturmian word, then  $\mathcal{L}(s) = \mathcal{L}(\sqrt{s})$ . That is, the square root map preserves the language of a Sturmian word.

伺 と く ヨ と く ヨ と

• Generalization: square root map for optimal squareful words.

A B A A B A

- Generalization: square root map for optimal squareful words.
- Optimal squareful word: aperiodic word whose every position begins with one of the six min. squares.

4 3 6 4 3 6

- Generalization: square root map for optimal squareful words.
- Optimal squareful word: aperiodic word whose every position begins with one of the six min. squares.

#### Question

Can we characterize Sturmian words among optimal squareful words with  $\sqrt{\ }?$ 

伺い イヨト イヨト

• Let s be a optimal squareful word.

A B A A B A

- Let s be a optimal squareful word.
- If  $\mathcal{L}(s) = \mathcal{L}(\sqrt{s})$ , must s be Sturmian?

- Let s be a optimal squareful word.
- If  $\mathcal{L}(s) = \mathcal{L}(\sqrt{s})$ , must s be Sturmian?
- NO!

・ 同 ト ・ ヨ ト ・ ヨ ト

- Let s be a optimal squareful word.
- If  $\mathcal{L}(s) = \mathcal{L}(\sqrt{s})$ , must s be Sturmian?
- NO!

### Theorem (P.-W.)

# There exists a non-Sturmian optimal squareful word $\Gamma$ such that $\sqrt{\Gamma}=\Gamma.$

• Consider the word equation  $X_1^2 \cdots X_n^2 = (X_1 \cdots X_n)^2$ .

< ロ > < 同 > < 回 > < 回 > < 回 > <

- Consider the word equation  $X_1^2 \cdots X_n^2 = (X_1 \cdots X_n)^2$ .
- Let w be a factor of an optimal squareful word.

・ 同 ト ・ ヨ ト ・ ヨ ト

-

- Consider the word equation  $X_1^2 \cdots X_n^2 = (X_1 \cdots X_n)^2$ .
- Let w be a factor of an optimal squareful word. If

$$w^2 = X_1^2 \cdots X_n^2 = (X_1 \cdots X_n)^2$$

with minimal squares  $X_i^2$  as before, then w is a solution to this word equation.

- Consider the word equation  $X_1^2 \cdots X_n^2 = (X_1 \cdots X_n)^2$ .
- Let w be a factor of an optimal squareful word. If

$$w^2 = X_1^2 \cdots X_n^2 = (X_1 \cdots X_n)^2$$

with minimal squares  $X_i^2$  as before, then w is a solution to this word equation.

• w = 01010010 is a solution.

• Fixed points of  $\sqrt{-}: 01c_{\alpha}$  and  $10c_{\alpha}$ .

・ 同 ト ・ ヨ ト ・ ヨ ト

- Fixed points of  $\sqrt{-}: 01c_{\alpha}$  and  $10c_{\alpha}$ .
- $01c_{\alpha}$  and  $10c_{\alpha}$  are fixed points because they have arbitrarily long solutions to the word equation

$$X_1^2\cdots X_n^2=(X_1\cdots X_n)^2$$

as square prefixes.
