

# On critically bounded solutions to the 3D Navier-Stokes equations

Christophe Prange

Cergy Paris Université  
CHRISTOPHE.PRANGE@CYU.FR

## Abstract

In this talk we will outline several recent developments concerning the regularity of solutions to the 3D Navier-Stokes equations under a Type I assumption. We will focus in particular on: geometric concentration, norm concentration and quantitative regularity. The talk is based on works with Tobias Barker.
