## About the name SWR

Picard's Fixed Point  

$$\begin{cases}
\frac{d}{dt}y(t) = f(t, y(t)) \text{ on } [0, T], \\
y(0) = y_0. \\
\frac{d}{dt}y^{n+1}(t) = f(t, y^n(t)) \Longrightarrow y^{n+1}(t) = y_0 + \int_0^t f(s, y^n(s)) ds
\end{cases}$$

#### Theorem (E. Lindelof (1894))

For f continuous and uniformly Lipschitz with respect to y (constant L) then the sequence  $(y^n)_n$  is convergent and the error satisfies

$$||y - y^n||_{\infty} \le \frac{(LT)^n}{n!} ||y - y^0||_{\infty}.$$

(日) (日) (日) (日) (日) (日) (日) (日)

## Convergence of the SWR Algorithm

$$\begin{cases} \frac{\partial e_1^{n+1}}{\partial t} - \nu \frac{\partial^2 e_1^{n+1}}{\partial x^2} = 0 \text{ in } (-L, \delta) \times (0, T) \\ e_1^{n+1}(\delta, \cdot) = e_2^n(\delta, \cdot) \\ + B.C. \end{cases} \begin{cases} \frac{\partial e_2^{n+1}}{\partial t} - \nu \frac{\partial^2 e_2^{n+1}}{\partial x^2} = 0 \text{ in } (0, L) \times (0, T) \\ e_2^{n+1}(0, \cdot) = e_1^n(0, \cdot) \\ + B.C. \end{cases}$$

•  $T = \infty$ : linear bound (use Maximum Principle):

$$\|e_1^n(0,\cdot)\|_{L^{\infty}} \leq \left(\frac{L-\delta}{L+\delta}\right)^n \|e_1^0(0,\cdot)\|_{L^{\infty}}$$

•  $T < +\infty$ : superlinear bound (use the heat kernel):

$$\|e_1^n(0,\cdot)\|_{L^\infty} \leq erfc(rac{n\delta}{2\sqrt{
u T}})\|e_1^0(0,\cdot)\|_{L^\infty}$$

Classical SWR Algorithm

Optimized SWR Algorithm 000000000 00000

#### Linear convergence

The proof of the linear convergence relies on the maximum principle.

$$\begin{cases} \frac{\partial u}{\partial t} - \nu \frac{\partial^2 u}{\partial x^2} = 0 & \text{on } (a, b) \times (0, +\infty), \\ u(\cdot, 0) = 0, \\ u(a, \cdot) = g_1, \\ u(b, \cdot) = g_2. \end{cases}$$

#### Lemma

The solution of the heat equation on  $(a, b) \times (0, +\infty)$  satisfies:

$$\|u(x,\cdot)\|_{\infty} \leq \frac{b-x}{b-a} \|g_1\|_{\infty} + \frac{x-a}{b-a} \|g_2\|_{\infty}, \ x \in [a,b].$$

▲□▶ ▲□▶ ▲目▶ ▲目▶ 三目 - のへで

Classical SWR Algorithm

Optimized SWR Algorithm 000000000 00000

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

## Linear convergence

$$\begin{cases} \frac{\partial e_1^{n+1}}{\partial t} - \nu \frac{\partial^2 e_1^{n+1}}{\partial x^2} = 0 \text{ on } (-L,\delta) \times (0,T) \\ e_1^{n+1}(\delta,\cdot) = e_2^n(\delta,\cdot) \\ e_1^{n+1}(0,\cdot) = 0 \end{cases} \begin{cases} \frac{\partial e_2^{n+1}}{\partial t} - \nu \frac{\partial^2 e_2^{n+1}}{\partial x^2} = 0 \text{ on } (0,L) \times (0,T) \\ e_2^{n+1}(0,\cdot) = e_1^n(0,\cdot) \\ e_2^{n+1}(L,\cdot) = 0 \end{cases}$$

We apply the maximum principle:

$$\begin{aligned} \|e_1^{n+1}(0,\cdot)\|_{\infty} &\leq \frac{L}{L+\delta} \|e_2^n(\delta,\cdot)\|_{\infty}, \\ \|e_2^{n+1}(\delta,\cdot)\|_{\infty} &\leq \frac{L-\delta}{L} \|e_1^n(0,\cdot)\|_{\infty}. \end{aligned}$$

Combining gives the result:

$$\|e_1^{n+1}(0,\cdot)\|_{\infty}\leq rac{L-\delta}{L+\delta}\|e_1^{n-1}(0,\cdot)\|_{\infty}.$$

Classical SWR Algorithm 000000000

#### Adimentionalized heat equation

$$\begin{cases} \frac{\partial u}{\partial t} - \nu \frac{\partial u}{\partial x^2} = 0 \text{ on } [0, L] \times [0, T], \\ u(0, \cdot) = \sin(3\pi \frac{t}{T}), \\ u(L, \cdot) = 0, \\ u(\cdot, 0) = 0, \end{cases} \longrightarrow \begin{cases} \frac{\partial u}{\partial t} - \frac{\nu T}{L^2} \frac{\partial u}{\partial x^2} = 0 \text{ on } [0, 1] \times [0, 1], \\ u(0, \cdot) = \sin(3\pi t), \\ u(1, \cdot) = 0, \\ u(\cdot, 0) = 0, \end{cases}$$

Classical SWR Algorithm

## Solving in Laplace variables

#### Obtaining the convergence factor We have the relation

$$\hat{u}_1^{n+1}(0,s) := 
ho(p,s)\hat{u}_1^{n-1}(0,s)$$

with

$$\rho(\mathbf{p},\omega) = \left|\frac{\sqrt{i\omega + A} - \mathbf{p}}{\sqrt{i\omega + A} + \mathbf{p}}\right|^2 = \frac{\mathbf{p}^2 - \sqrt{2}\mathbf{p}\sqrt{A + \sqrt{A^2 + \omega^2}} + \sqrt{A^2 + \omega^2}}{\mathbf{p}^2 + \sqrt{2}\mathbf{p}\sqrt{A + \sqrt{A^2 + \omega^2}} + \sqrt{A^2 + \omega^2}}$$

where  $A = Re/Fr^2$  et  $p = \sqrt{Rep}$ .

#### Optimizing the convergence factor

$$\min_{p \in \mathbb{R}} \max_{\omega \in [\omega_{\min}, \omega_{\max}]} \rho(p, \omega).$$

Classical SWR Algorithm

Optimized SWR Algorithm

## Optimization of the convergence factor for AD equation

The convergence factor of the OSWR algorithm applied to the advection-diffusion equation

$$\frac{\partial u}{\partial t} + a \frac{\partial u}{\partial x} - \nu \frac{\partial^2 u}{\partial x^2} + cu = 0.$$

is

$$\rho_{ad}(p,\omega) = \left| \frac{\sqrt{i\omega + A} - p}{\sqrt{i\omega + A} + p} \right|^2 \text{ with } A = \frac{a^2 + 4\nu c}{4\nu}.$$

Theorem (M.J. Gander, L. Halpern, 2007)

The solution of the min-max computed on  $[0, \omega_{max}]$  problem is

$$\begin{aligned} q_1 &= (A^2 + \omega_{max}^2)^{1/4} & \text{if } \omega_{max}^2 > 4A^2(2 + \sqrt{5}) \\ q_2 &= \left(A + \sqrt{2A}\sqrt{A + \sqrt{A^2 + \omega_{max}^2}}\right)^{1/2} & \text{if } \omega_{max}^2 \le 4A^2(2 + \sqrt{5}) \end{aligned}$$

Classical SWR Algorithm

Optimized SWR Algorithm

# Optimization of the convergence factor

#### Let $q_1$ et $q_2$ defined by

$$q_{1} = (A^{2} + \omega_{max}^{2})^{1/4}$$
$$q_{2} = \left(A + \sqrt{A + \sqrt{A^{2} + \omega_{min}^{2}}}\sqrt{A + \sqrt{A^{2} + \omega_{max}^{2}}}\right)^{1/2}$$

#### Theorem

Optimizing the convergence factor gives a unique solution:  $p^* = \min(q_1, q_2)$ , If  $q_1 < q_2$  then the optimized solution satisfies

$$\min_{p_0 \in \mathbb{R}} \max_{\omega \in [\omega_{\min}, \omega_{\max}]} \rho(p_0, \omega) = \rho(q_1, \omega_{\max}).$$

If  $q_1 > q_2$  then the optimized solution satisfies

$$\min_{\rho \in \mathbb{R}} \max_{\omega \in [\omega_{\min}, \omega_{max}]} \rho(\rho, \omega) = \rho(q_2, \omega_{min}) = \rho(q_2, \omega_{max}).$$
