

Metastability of overdamped Langevin dynamics

Jungkyoung Lee

March 22, 2023

Overdamped Langevin dynamics exhibit metastability when there are multiple critical points in the potential function. So far, Markov chain descriptions of metastable transitions between global minima on a single time scale have been studied. In this talk, we will explain the metastability of the dynamics on multiple time scales, and briefly introduce a proof based on the resolvent equation approach.
